AI Lead Qualification & CRM Automation — Scenario Overview

Purpose: Automatically qualify incoming sales leads using AI and route them into the right Google Sheet (or alert the team) based on lead quality — removing manual lead screening.

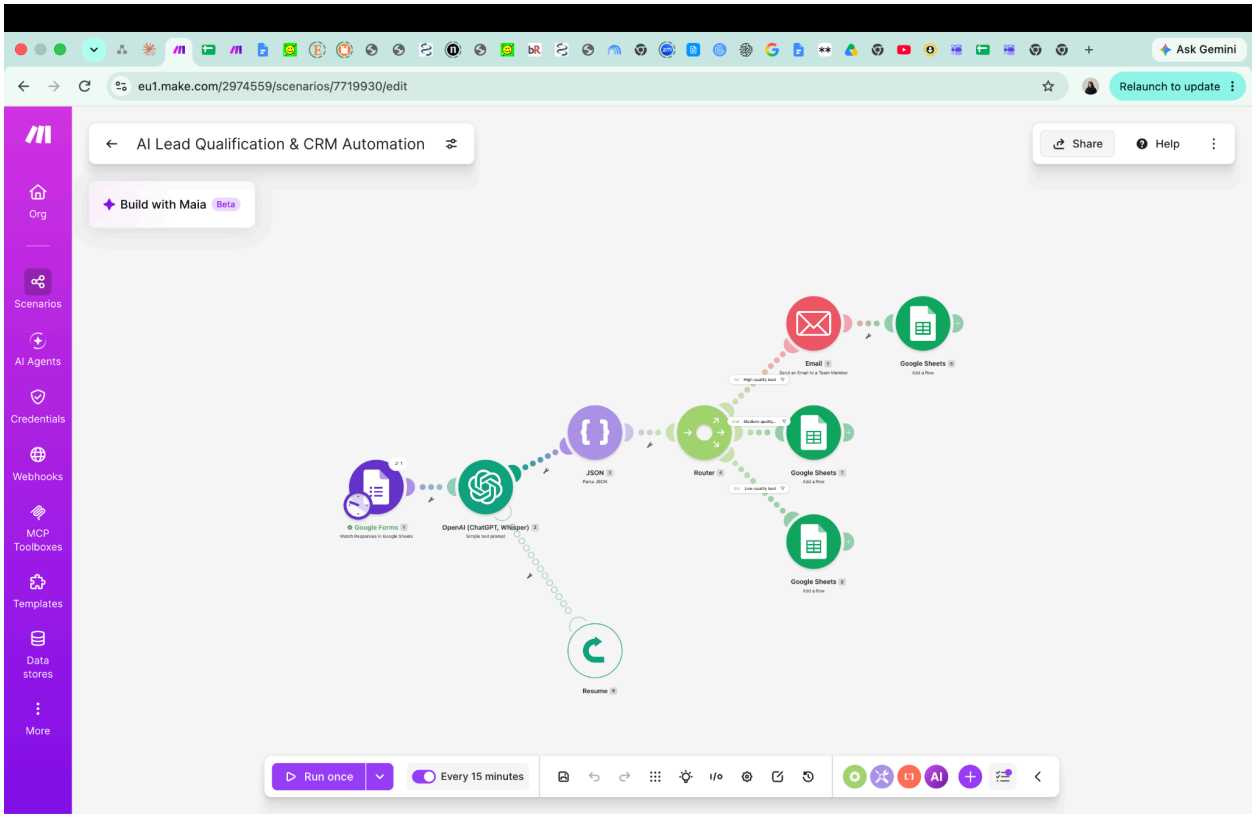

Trigger: Google Form submission (Name, Email, Company, Job Title, Budget, Message), automatically synced to a linked Google Sheet and watched by Make every 15 minutes.

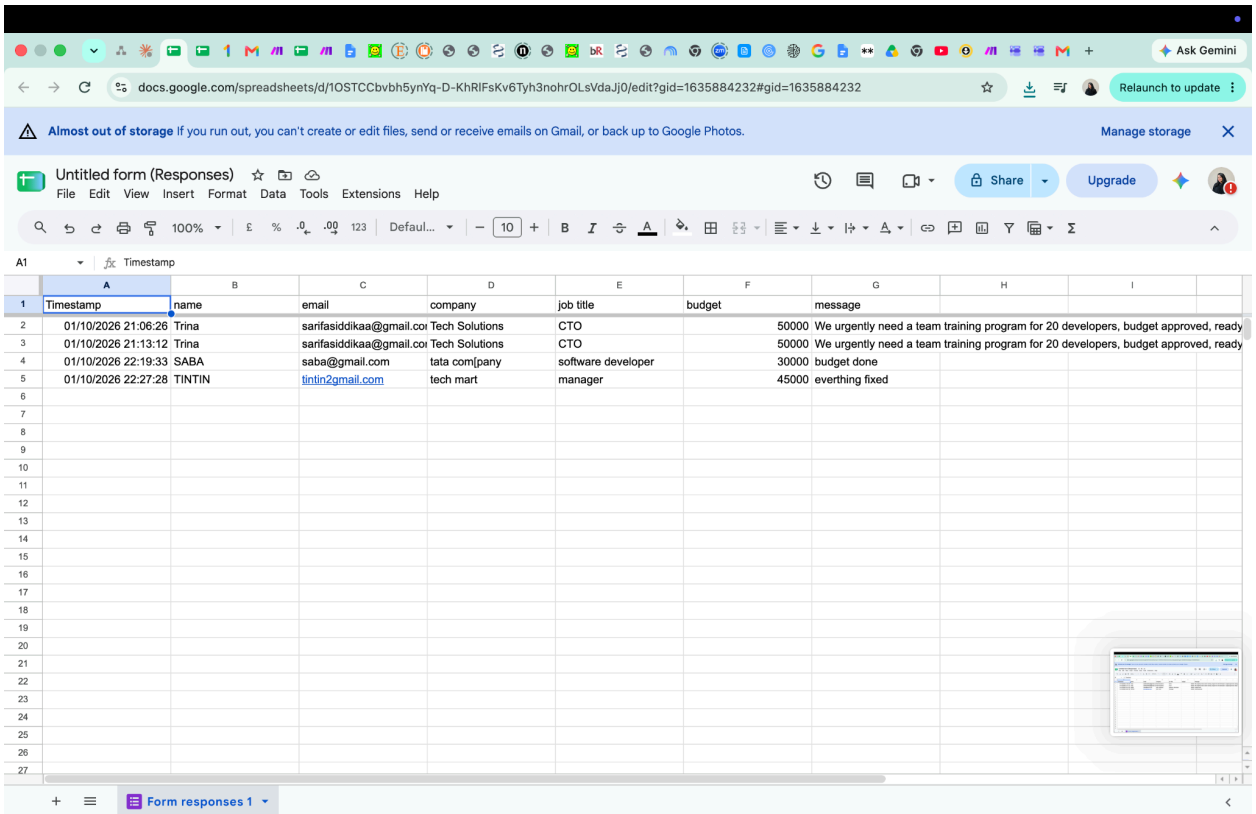

Flow

1. **Google Forms (Watch Responses)** — detects a new lead submission.
2. **OpenAI (GPT)** — analyzes the lead's message, budget, and job title; generates a summary, intent, a lead score (1–10), and a recommended next action.
3. **JSON Parser** — converts the AI's text response into structured data.
4. **Router** — splits the flow into 3 paths based on lead score:
    - **High-Quality (score ≥ 8):** sends an email alert to the sales team + logs to the CRM sheet.
    - **Medium-Quality (score 5–7):** logs to the CRM sheet for follow-up.
    - **Low-Quality (score < 5):** logs to a separate Archive sheet.
5. **Error Handling:** if the AI step fails, a fallback (Resume) logs the lead as "Manual review required" instead of breaking the scenario.

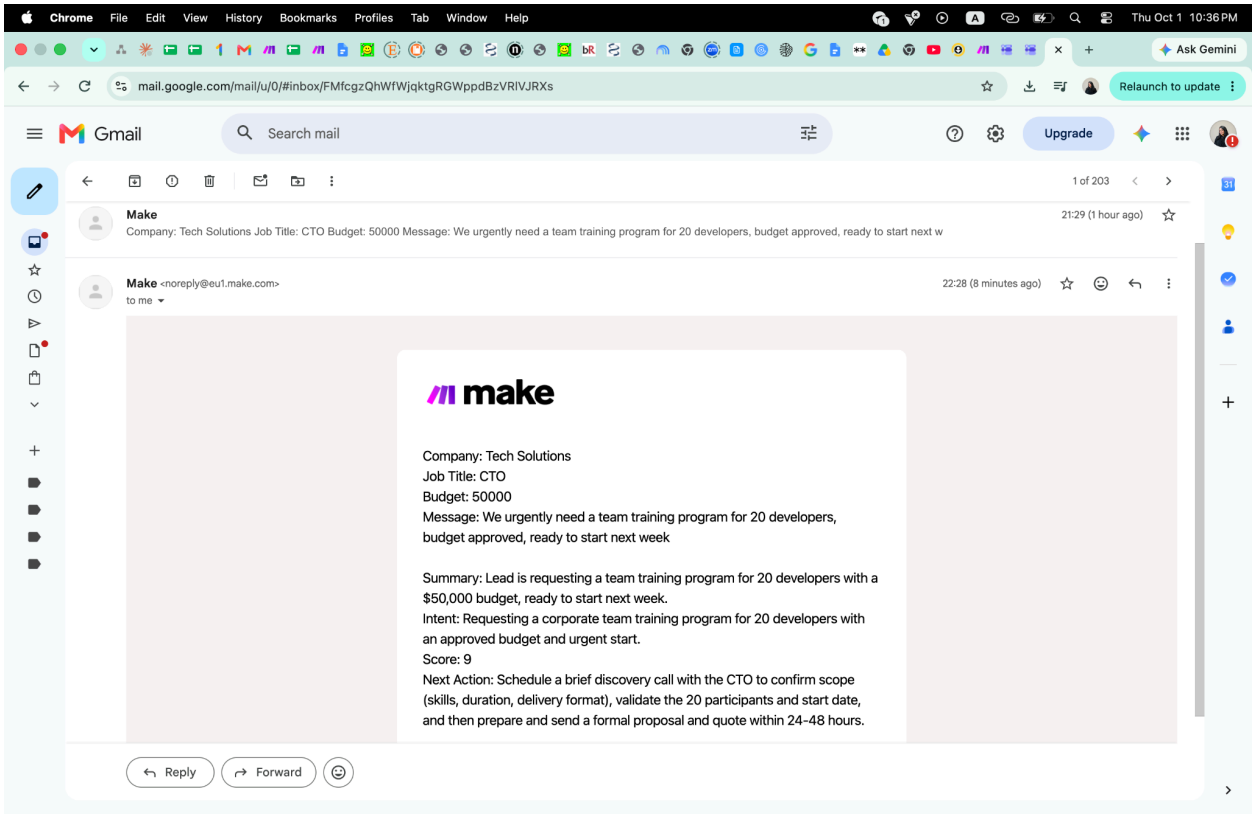

Outcome

Every new lead is automatically scored, categorized, and logged within minutes — with high-value leads flagged instantly by email — with zero manual work.

Company: Tech Solutions
Job Title: CTO
Budget: 50000
Message: We urgently need a team training program for 20 developers, budget approved, ready to start next week
Summary: Lead is requesting a team training program for 20 developers with a $50,000 budget, ready to start next week.
Intent: Requesting a corporate team training program for 20 developers with an approved budget and urgent start.
Score: 9
Next Action: Schedule a brief discovery call with the CTO to confirm scope (skills, duration, delivery format), validate the 20 participants and start date, and then prepare and send a formal proposal and quote within 24-48 hours.
